

(Figure 4: Cross section showing the stratigraphy at the Powerline showing and the position of the trench from which samples KX157 and KX158 originate. The position of gold detector strikes is also shown. Note the two gold-bearing horizons, one at the bottom of the Lower Cannonball conglomerate and the other at the bottom of the Upper Cannonball conglomerate. The upper gold-bearing horizon may correlate with that found approximately 2 km northeast at Purdy's Reward.)
