

## NEWS RELEASE

**MDxHealth enters into commercial agreement for SelectMDx with  
Fondazione Luigi Maria Monti – Istituto Dermopatico dell' Immacolata  
Hospital in Rome**

**HERSTAL, BELGIUM and IRVINE, CA** - 07:00 CEST, February 28, 2017 - MDxHealth SA (Euronext: [MDXH.BR](https://www.mdxhealth.com/MDXH.BR)) a world-leading player in the field of molecular diagnostic prostate cancer testing, today announces that it has entered into a commercial service agreement with Fondazione Luigi Maria Monti - Istituto Dermopatico dell' Immacolata (IDI), a leading research Hospital in Rome, to provide SelectMDx® for prostate cancer as a service test.

SelectMDx® is a proprietary urine-based, molecular diagnostic test that offers a non-invasive 'liquid biopsy' method to assess a man's risk for prostate cancer. Under the terms of the agreement, the IDI Laboratory of Clinical Molecular Diagnostics, will perform SelectMDx testing locally by purchasing SelectMDx CE-marked IVD kits from MDxHealth, initially using the MDxHealth Central Lab in Nijmegen, The Netherlands for processing tests.

*"We are excited that Istituto Dermopatico Immacolata Hospital is going to offer SelectMDx service testing to assist physicians in identifying patients at increased risk of harbouring aggressive, potentially lethal, prostate cancer" said Dr. Jan Groen, CEO of MDxHealth. "IDI's broad hospital network will significantly contribute to the successful market penetration of SelectMDx in Italy."*

*"We are delighted to offer this innovative test to our patients," commented Prof. Antonio M. Leozappa, President of Fondazione Luigi Maria Monti – IDI Hospital - Italy. "This partnership reinforces our commitment to provide our oncologists and urologists with a service test facilitating individualized and personalized medicine paths for patients. We believe that utilising state of the art diagnostics such as SelectMDx will allow our hospital to give our patients the best possible care."*

**=== END OF PRESS RELEASE ===**

**About SelectMDx for Prostate Cancer**

Of the nearly 2 million prostate biopsies performed each year, less than a third find cancer. Most of these men could have avoided a painful and invasive prostate biopsy procedure, with its associated complications and costs. SelectMDx for Prostate Cancer is a proprietary urine-based, molecular diagnostic test that offers a non-invasive 'liquid biopsy' method to assess a man's risk for prostate cancer. SelectMDx helps identify men at increased risk of harbouring aggressive, potentially lethal, prostate cancer who may benefit most from a prostate biopsy and earlier detection. The test delivers a negative predictive value (NPV) of 98% for clinically significant disease, helping to reduce the need for MRI procedures and invasive prostate biopsies by up to 50%, thereby reducing healthcare costs.

## About MDxHealth

MDxHealth is a multinational healthcare company that provides actionable molecular diagnostic information to personalize the diagnosis and treatment of cancer. The company's tests are based on proprietary genetic, epigenetic (methylation) and other molecular technologies and assist physicians with the diagnosis of urologic cancers, prognosis of recurrence risk, and prediction of response to a specific therapy. The Company's European headquarters are in Herstal, Belgium, with laboratory operations in Nijmegen, The Netherlands, and US headquarters and laboratory operations based in Irvine, California. ## About IDI

Since 1990 Istituto Dermopatico dell' Immacolata Hospital has been recognized by the Italian Ministry of Research and Health as a Research Hospital. The Hospital has several Research Departments looking after rare dermatological diseases, varying from inflammatory ones, to immune-mediated diseases to skin tumors, being the Reference Centre for whole Lazio Region. The Laboratory Diagnostic Department, following the Hospital strategies and clinical patient needs, as per the efficacy, efficiency and safety criteria, performs lab tests on different biological materials, for health promotion, prevention, diagnosis, prognosis, monitoring and therapeutic surveillance. The laboratory is composed by several units such as biochemistry, allergology, immunology, microbiology, pharmatotoxicology, molecular biology and genetics. [www.idi.it](http://www.idi.it)
