

## RSA Conference: Gemalto unveils the industry's most robust encryption solutions to protect data across the cloud, enterprise and high-speed networks

New SafeNet Luna HSM and 100 Gbps high-speed encryptors provide the industry's fastest speeds and performance to encrypt data

**Amsterdam – February 13, 2017** - As data encryption is more widely adopted to protect sensitive applications and information, Gemalto (Euronext NL0000400653 GTO), the world leader in digital security, today announced the launch of two new solutions that give enterprises unparalleled speed, performance and security when encrypting data across the cloud, enterprise applications and high-speed corporate networks.

Gemalto's new <u>SafeNet Luna HSM</u> 7 (Hardware Security Module) offers the industry's most scalable platform to perform the highest number of simultaneous cryptographic operations including encryption, decryption, authentication and digital signing while providing total, tamper-resistant protection for cryptographic keys. The new capabilities enable enterprises to support encryption at massive scale and secure even larger volumes of encryption keys that protect sensitive information and applications in the cloud and on-premise.

In addition, Gemalto today also announced the launch of its new 100 Gbps <u>SafeNet High Speed Encryptor</u> that provides unmatched performance and security to protect data and sensitive communications across large-scale, high-capacity networks. The new SafeNet CN9100 High Speed Encryptor, developed by Gemalto and encryption partner <u>Senetas</u>, encrypts network traffic at Layer 2 to protect information sent across networks, between corporate offices and into the cloud at native speeds of 100 Gbps.

These latest editions to Gemalto's extensive data protection portfolio are being showcased at RSA Conference 2017 (South Hall, Booth #1907).

"As organizations increasingly embrace the Internet of Things (IoT) and cloud-based applications, their requirements to cope with big data intensify. Streamlined management of data security controls have become vital in securing data as it moves between enterprises, multi-cloud environments, networks and devices," said Todd Moore, Senior Vice President of Encryption Products at Gemalto. "This necessitates organizations to conduct more cryptographic operations in the same, or a shorter amount of time, which means they need an easy, scalable way to attach security directly to the data in order to protect it while in motion and at rest."

"Because organizations are faced with securing more data, identities, transactions and connection points, highly scalable and frictionless data encryption is critical," said Garrett Bekker, principal security analyst at 451 Research. "It's no longer an option to secure one part of the ecosystem, security is required throughout the entire data lifecycle, from the cloud and core of the enterprise to the edge of the network."

More about Gemalto's SafeNet Luna HSM and SafeNet High Speed Encryptors:

The latest <u>SafeNet Luna HSM 7</u> brings best-in-class performance and industry leading security for the protection of cryptographic keys in high-assurance, tamper-resistant hardware. Gemalto's HSM portfolio offers a broad range of options to accommodate the breadth of security, performance, operational and compliance needs of customers. With up to 10,000 RSA-2048 or 20,000 ECC P-256 operations per second, the SafeNet

Luna HSMs easily scales to support the execution requirements in a number of markets such as IoT, Blockchain and data encryption.

The most recent addition to Gemalto's <u>SafeNet High Speed Encryptor</u> portfolio protects communications at speeds of 100 Gbps encrypted bandwidth. Ensuring the available bandwidth is maximed, the SafeNet Ethernet Encryptor CN9100 features low latency of under 2 microseconds to ensure network performance is optimized as increasingly large amounts of data, and big data, cross the network securely in real-time at higher bandwidths.

## **About Gemalto**

Gemalto (Euronext NL0000400653 GTO) is the global leader in digital security, with 2015 annual revenues of €3.1 billion and customers in over 180 countries. We bring trust to an increasingly connected world.

Our technologies and services enable businesses and governments to authenticate identities and protect data so they stay safe and enable services in personal devices, connected objects, the cloud and in between.

Gemalto's solutions are at the heart of modern life, from payment to enterprise security and the internet of things. We authenticate people, transactions and objects, encrypt data and create value for software – enabling our clients to deliver secure digital services for billions of individuals and things.

Our 14,000+ employees operate out of 118 offices, 45 personalization and data centers, and 27 research and software development centers located in 49 countries.
