

Press Release March 1, 2017

IBT to present at Bio-Europe Spring 2017

Infant Bacterial Therapeutics AB (publ) ("IBT"), a pharmaceutical company that develops drugs that meet the medical needs of premature infants, will present the company on Tuesday March 21, 2017 at Bio-Europe Spring Conference, Rare and Orphan Diseases track, at CCIB Convention Centre, Barcelona, Spain. The conference takes place between March 20-22, 2017.

Staffan Strömberg, President and Chief Executive Officer will represent the company in the presentation scheduled to begin at 11:30 local time.

About IBT:

Infant Bacterial Therapeutics AB (publ) ("IBT") is a pharmaceutical company with a vision to develop drugs influencing the human infant microbiome, and thereby prevent or treat rare diseases affecting premature infants. Using its extensive experience in live bacterial therapeutics and its well-developed knowledge of the action of *Lactobacillus reuteri*, IBT is developing its lead drug candidate IBP-9414, to prevent necrotizing enterocolitis ("NEC"), a fatal, rare disease that afflicts premature infants. IBT is further pursuing a second rare disease programme IBP-1016 for the treatment of an unmet medical need in gastroschisis, a severe disease in infants. By developing these drugs, IBT has the potential to fulfil unmet needs for diseases where there are currently no prevention or treatment therapies available.

The FDA and the European Commission have granted IBT Orphan Drug Designation, and the FDA have granted Rare Pediatric Disease Designation for IBP-9414 for the prevention of NEC.

IBT is listed on Nasdaq First North with Erik Penser Bank as Certified Adviser.
